

Contact Volume by Issue Type and Market

Support Demand KPIs

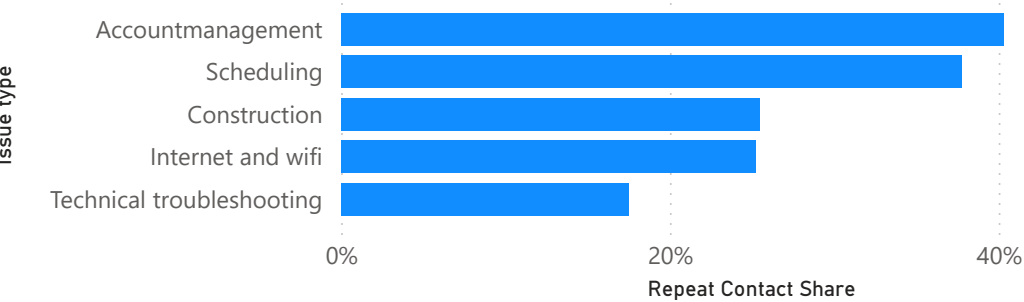

Key takeaway: Contact volume is highly concentrated in Miami and driven primarily by Internet & Wifi and Technical Troubleshooting issues, indicating clear areas for operational focus.

Contacts by Issue Type and Service Area

Issue type	Service area	Total Contacts	Repeat Contacts	Repeat Contact Share
Accountmanagement	Miami	3354	850	25%
Construction	Miami	379	95	25%
Internet and wifi	Miami	23496	5969	25%
Scheduling	Miami	2044	691	34%
Technical troubleshooting	Miami	28707	5042	18%
Accountmanagement	New York	2257	1498	66%
Construction	New York	108	28	26%
Internet and wifi	New York	14723	3888	26%
Scheduling	New York	1748	754	43%
Technical troubleshooting	New York	3187	638	20%
Accountmanagement	San Francisco	342	52	15%
Construction	San Francisco	28	8	29%
Internet and wifi	San Francisco	2401	396	16%
Scheduling	San Francisco	101	24	24%
Technical troubleshooting	San Francisco	2304	307	13%
Total		85179	20240	24%

Note. Repeat Contact Share = Repeat Contacts / Total Contacts within the selected Issue Type.

Repeat Contact Share by Issue Type

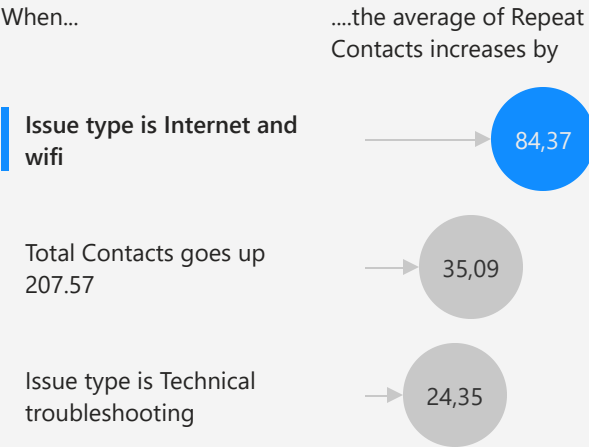

Drivers of Repeat Contact Volume

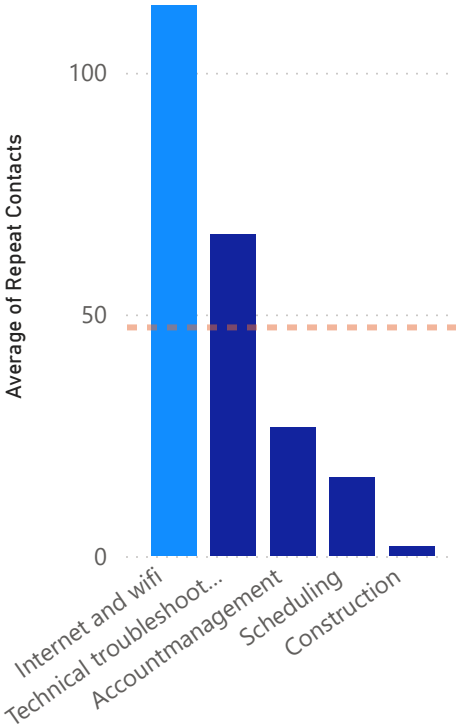

Key influencers Top segments

What influences Repeat Contacts to ?

← Repeat Contacts is more likely to increase when Issue type is Internet and wifi than otherwise (on average).

☐ Only show values that are influencers

Priority	Finding	Business Impact	Recommendation
High	Account Management and Scheduling have the highest repeat contact shares	Customers require multiple interactions before their issue is resolved, creating increased customer effort and support demand	Review both processes to identify friction points. Simplify workflows and improve communication to increase first-contact resolution rates
High	Contact volumes are highly concentrated in Miami	Support demand is heavily dependent on a single service area, increasing operational and localized pressures	Conduct targeted review of Miami support operations through a root-cause analysis, and establish market-level performance monitoring
High	Internet & WiFi and Technical Troubleshooting generate the highest number of contacts	Both drive the majority of support workload and likely represent the largest source of customer effort and operational cost	Invest in knowledge base improvements and standardized workflows to reduce unnecessary support contact
Medium	24% of all contacts are repeat contacts, of which 10% are noted as high-repeat contacts	A meaningful share of issues remains unresolved after the initial interaction, increasing operational costs	Implement escalation triggers for customers with multiple repeat contacts and track repeat-contact trends
Medium	Higher contact volumes are generally associated with higher repeat-contact volumes	As demand increases, unresolved issues can compound and place additional strain on support resources, potentially reducing service quality	Focus improvement initiatives on high-volume issue categories
Low	Construction-related issues generate relatively low contact volumes and repeat contacts compared to other categories	Currently has limited impact on overall support demand and customer service workload	Continue monitoring performance but prioritize improvement efforts on higher-volume and higher-repeat issues

Immediate Priorities

- Stabilize Miami demand
- Reduce high-volume issue categories
- Reduce repeat-contact pressure

Improvement Opportunities

- Improve first-contact effectiveness
- Prioritize high-impact issue categories

Monitoring Area

- Monitor low-impact categories

Implementation Roadmap

Investigate Miami service demand drivers and prioritize improvement areas

Review Internet & Wifi and Technical Troubleshooting support journeys

Streamline Account Management and Scheduling workflows to reduce customer effort and improve first-contact resolution

Implement repeat-contact monitoring and escalation rules to manage unresolved and high-repeat cases

Expand new supporting capabilities across service lines and continuously monitor customer experience KPIs to drive improvements

Metrics Definitions

Metric	Calculation	Definition
Total Contact Volume (TCV)	Sum of all customer support contacts across all issue types and service areas	Measures overall support demand
Repeat Contact Volume (RCV)	Sum of all contacts excluding the initial contact stage	Measures the volume of customers requiring multiple interactions
Repeat Contact Share	RCV / TCV	Measures the percentage of customers requiring follow-up interactions
High Repeat Contact Share*	(3rd + 4th + 5th + 6th + 7th Repeat Contacts) / TCV	Measures the proportion of customers experiencing unresolved issues
Estimated First Contact Resolution (FCR)	Initial contact stage / TCV	Measures the percentage of interactions resolved during the first contact stage

Note. *Contacts reaching the 3rd repeat stage or higher were deemed as High Repeat Contacts. Reasoning follows as the initial contact stage is seen as the first interaction, the second contact stage is seen as a follow-up, and a third contact stage is seen as an unresolved issue.

Field Definitions

Field	Definition
Issue Type	Category for customer issues (e.g., Internet & WiFi, Technical Troubleshooting, Scheduling etc.)
Service Area	The geographical region where the contact originated
